

Where each layer is documented now

Use this as the maintenance map:

Layer	Purpose	Main files to revise
Mandatory agent behavior	Requires documentation-impact assessment before relevant plans or implementations are finalized	AGENTS.md
Context and skill routing	Tells agents when to use documentation-impact-assessment versus documentation-review	AI_CONTEXT.md
Workflow model	Explains classifier → assessment → review → human approval, plus pre-push and MR behavior	AI_PLAYBOOK.md
Maintainer instructions	Explains how to add skills, maintain mappings, validators, adapters, vendor imports, and publishing evidence	docs/ai/SKILL_MAINTENANCE.md
Path-to-document mapping	Deterministically maps changed paths to impact areas and candidate documents	docs/ai/documentation-impact-map.tsv
Semantic impact decision	Chooses NO_DOCUMENTATION_IMPACT, DOCUMENTATION_REVIEW_REQUIRE D, DOCUMENTATION_UPDATE_REQUIRE D, or NEEDS_VERIFICATION	.agents/skills/documentation-impact-assessment/SKILL.md
Semantic document review	Reviews selected current documents for correctness, evidence, currency, and safety	.agents/skills/documentation-review/SKILL.md
Deterministic impact classifier	Compares branch changes with a base and emits impact candidates	scripts/check-documentation-impact.sh
Structural validator	Validates skills, adapters, paths, provenance, retired topology, and artifact hygiene	scripts/validate-ai-guidance.sh

Local publication gate	Runs deterministic validation and classification before push	.githubhooks/pre-push
MR preparation gate	Requires validator, classifier, and semantic-impact evidence before Stage 1 is approvable	.agents/skills/publish-ai-mr/SKILL.md
Deterministic push/MR action	Pushes and creates the MR only after Stage 1 approval	scripts/create-ai-mr.sh
Claude repository adapter	Imports mandatory policy and explains Claude-specific routing boundaries	CLAUDE.md
Claude skill exposure	Makes canonical skills visible to Claude without duplicating content	.claude/skills/*
Official Android imported source	Pinned upstream content and provenance	.agents/vendor/official-android/
Native official Android exposure	Relative symlinks from discovery surface to vendored source	.agents/skills/official-android-*

A quick rule for revisions:

- Change **when assessment is mandatory** → AGENTS.md.
- Change **which skill or document is selected** → AI_CONTEXT.md.
- Change **overall workflow semantics** → AI_PLAYBOOK.md.
- Change **maintainer procedure** → docs/ai/SKILL_MAINTENANCE.md.
- Change **which paths suggest which documents** → documentation-impact-map.tsv.
- Change **semantic classification behavior** → documentation-impact-assessment/SKILL.md.
- Change **document review criteria/output** → documentation-review/SKILL.md.
- Change **mechanical structural checks** → validate-ai-guidance.sh.
- Change **changed-path calculation/output** → check-documentation-impact.sh.
- Change **local blocking/warning behavior** → .githubhooks/pre-push.
- Change **MR evidence and Stage 1 prerequisites** → publish-ai-mr/SKILL.md.

- Change **actual push or MR command behavior** → create-ai-mr.sh.
